

EXPERIMENT NO: 02	DATE: July 22, 2026
COURSE: Low-Code Application Development (Zoho)	LAB: Zoho Low Code Lab
STUDENT NAME: AADITHYA RAJASEKARAN	USER / ROLL ID: 240701001

LAB EXPERIMENT 2 REPORT

1. AIM

To set up a Zoho Creator platform account, build a sample Order Management Application, and thoroughly explore the platform's multi-tier cloud architecture, navigation interface, and visual workspace components (Forms, Reports, and Dashboards).

2. SETTING UP ZOHO CREATOR & CREATING A SAMPLE APPLICATION

Step 1: Account Setup & Portal Authentication

- **Portal Navigation:** Access the official Zoho Creator web portal via browser (creator.zoho.com).
- **Authentication:** Log in using credential authentication or passwordless sign-in via Zoho OneAuth / Email authorization.

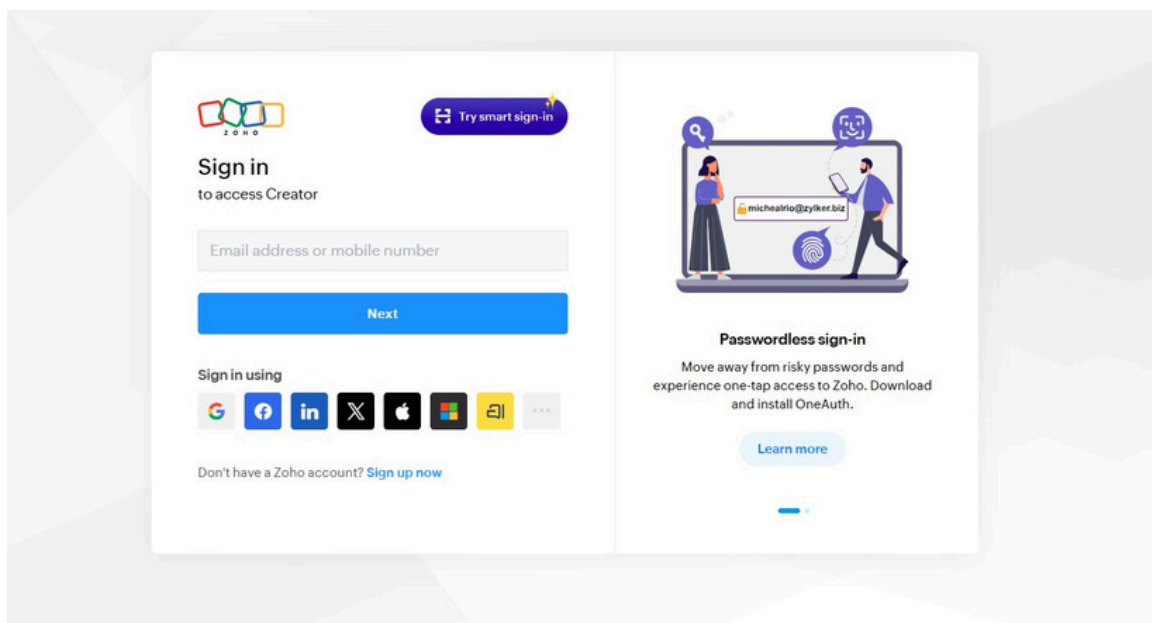

Figure 2.1: Zoho Creator Authentication & Portal Sign-In Workspace

Step 2: Accessing Developer Workspace

Upon successful authentication, access the main developer control panel (Develop > Applications). This central console lists all tenant applications managed under the user account (AADITHYARAJASEKARAN 240701001), including:

- **Student Management System** (SMS microservice)
- **My first Creator app / Order Management App** (MFC application)

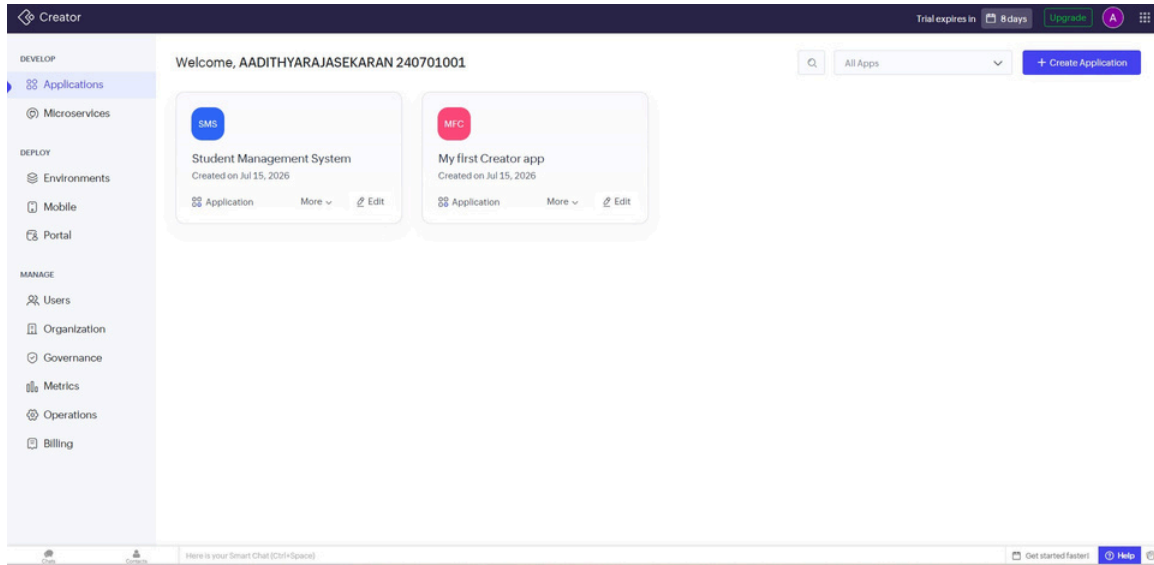

Figure 2.2: Developer Dashboard displaying deployed applications under user account

Step 3: Creating the Sample Application

A sample Order Management App was created by configuring form fields, data schema rules, and visual views. The app features key navigation modules including:

- **Home:** Central interactive dashboard.
- **All Orders:** Tabular data report view.
- **Add Order:** Input form for creating new customer order records.

3. EXPLORING WORKSPACE INTERFACES: FORMS, REPORTS & DASHBOARDS

i) Executive Dashboard Interface

The Home Dashboard displays real-time operational analytics and key performance indicators (KPIs) calculated directly from recorded transactions:

- **KPI Metric Cards:** Total Orders (20), Orders Delivered (3), Orders Confirmed (4), Ready to Ship (3).
- **Funnel Visualization:** Tracks order progression across operational stages (Confirmed → Processing → Delivered → Shipped → Ready to Ship → In Production).
- **Quantity Timeline Chart:** Bar graph visualizing order quantity distributions across items.

- **Embedded Quick Table:** Displays real-time pending In-Production Orders.

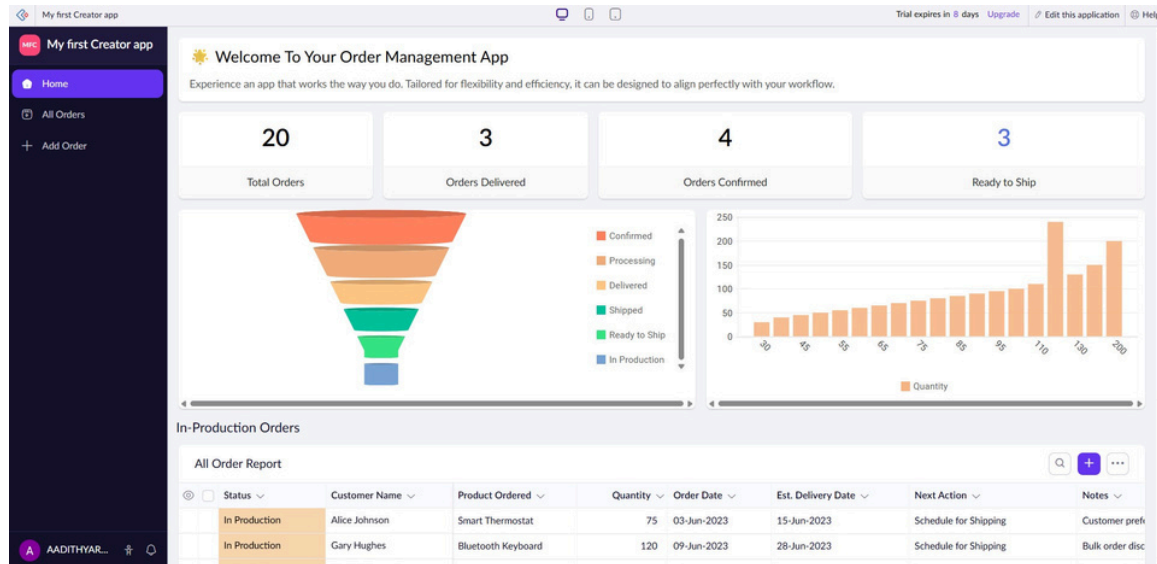

Figure 2.3: Interactive Executive Dashboard in Zoho Creator (Order Management App)

ii) Reports & Data Management Interface

The All Orders Report displays stored records in a structured grid layout with dynamic features:

- **Status Badges:** Color-coded tracking tags (In Production, Confirmed, Processing, Shipped, Delivered, Ready to Ship).
- **Sorting & Filtering:** Sorted dynamically by specific fields (e.g., sorted by Product Ordered).
- **Detailed Fields:** Customer Name, Product Ordered, Quantity, Order Date, Est. Delivery Date, Next Action, and Notes.

The 'All Orders Report' interface allows users to view and manage their order data. It includes a sidebar for navigation, a top navigation bar, and a main content area with a table of order records.

Status	Customer Name	Product Ordered	Quantity	Order Date	Est. Delivery Date	Next Action	Notes
In Production	Gary Hughes	Bluetooth Keyboard	120	09-Jun-2023	28-Jun-2023	Schedule for Shipping	Bulk order disc
Confirmed	Zoe Foster	Bluetooth Speaker	120	20-Jun-2023	05-Jul-2023	Assign to Fulfillment	Check for lates
In Production	Noah O'Donnell	Desk Organizer	85	15-Jun-2023	09-Jul-2023	Schedule for Shipping	Part of office s
Processing	Jane Doe	Eco-Friendly Charger	100	01-Jun-2023	10-Jun-2023	Confirm Inventory	Priority deliver
Confirmed	Mia Nelson	Ergonomic Chair	30	14-Jun-2023	07-Jul-2023	Assign to Fulfillment	Check for colo
Shipped	Carol White	Fitness Tracker	150	05-Jun-2023	20-Jun-2023	Update Customer	Delivery by co
Delivered	Rachel Stewart	Headphones	55	18-Jun-2023	15-Jul-2023	Request Feedback	Check sound q
Delivered	Kelly Knox	Laptop Stand	70	12-Jun-2023	03-Jul-2023	Request Feedback	Ensure timely c
Delivered	David Green	LED Desk Lamp	80	06-Jun-2023	22-Jun-2023	Request Feedback	First-time cust
Ready to Ship	Olivia Parker	Monitor Arm	95	16-Jun-2023	11-Jul-2023	Finalize Shipping Details	Include installa
Processing	Ethan Foster	Portable Charger	60	07-Jun-2023	24-Jun-2023	Confirm Inventory	Check compati
In Production	Alice Johnson	Smart Thermostat	75	03-Jun-2023	15-Jun-2023	Schedule for Shipping	Customer pref
Ready to Ship	Hannah Irvine	Smartwatch	90	10-Jun-2023	30-Jun-2023	Finalize Shipping Details	Gift wrapping r
Confirmed	John Smith	Solar Backpack	50	02-Jun-2023	12-Jun-2023	Assign to Fulfillment	Include promo
Shipped	Ian Jasper	Tablet Case	110	11-Jun-2023	01-Jul-2023	Update Customer	Fragile item, h

4. EXPLORING ZOHO CREATOR ARCHITECTURE & INTERFACE

A. Platform Architecture Layers

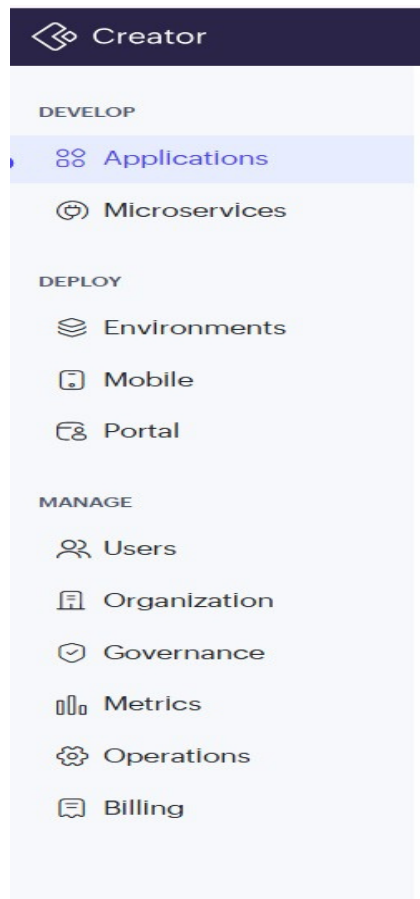

Zoho Creator utilizes a fully managed 3-Tier Multi-Tenant Cloud Architecture:

- **1. Presentation Tier (UI/UX):** Generates user-facing forms, drag-and-drop pages, and dashboards that automatically render responsively across Web, iOS, and Android mobile runtimes.
- **2. Logic & Workflow Tier (Deluge Engine):** Executes automated rules, data validation, approval pipelines, and event-driven actions written in Zoho's low-code programming language (Deluge).
- **3. Data & Storage Tier (Cloud Store):** Handles relational database mappings, lookups, search indexing, and secure multi-tenant cloud storage transparently.

B. Platform Management Navigation Bar

The left sidebar console provides centralized tools for lifecycle management split into three main panels:

- **DEVELOP:** Access Applications and Microservices.
- **DEPLOY:** Manage Cloud Environments (Dev, Staging, Production), Mobile App Builds, and Customer Portals.
- **MANAGE:** Administrative panel covering Users, Organization, Governance, Performance Metrics, Operations, and Billing.

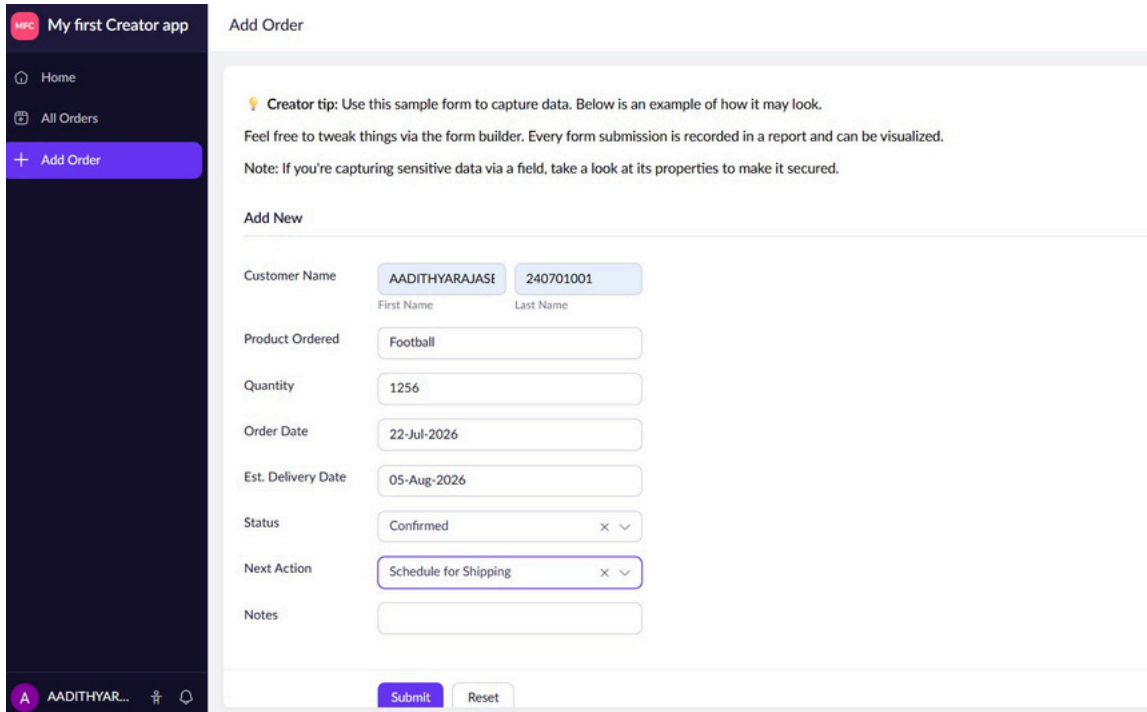

Step 1: Sign In / Developer Portal

Open Zoho Creator and sign in to access the developer workspace. After authentication, the user can manage applications, microservices, deployments, and administrative settings.

Step 2: Add Order Form

The Add Order form is used to enter customer details, product information, quantity, delivery dates, status, and notes. Submitted data is stored automatically and becomes available in reports.

The screenshot shows the 'Add Order' form in Zoho Creator. On the left is a dark sidebar with navigation links: 'Home', 'All Orders', and 'Add Order' (highlighted in purple). The main area has a header 'Add Order' and a 'Creator tip' section. Below the tip is a 'Note' about sensitive data. The form itself is titled 'Add New' and contains several fields: 'Customer Name' (split into 'First Name' with value 'AADITHYARAJASE' and 'Last Name' with value '240701001'), 'Product Ordered' (value 'Football'), 'Quantity' (value '1256'), 'Order Date' (value '22-Jul-2026'), 'Est. Delivery Date' (value '05-Aug-2026'), 'Status' (dropdown menu with 'Confirmed' selected), 'Next Action' (dropdown menu with 'Schedule for Shipping' selected), and 'Notes' (empty text area). At the bottom right are 'Submit' and 'Reset' buttons. The bottom of the sidebar shows a user profile for 'AADITHYAR...'.

Developer Navigation Components

Applications

Used to create and manage low-code applications. It provides access to forms, reports, pages, workflows, and application settings from a centralized workspace.

Microservices

Allows applications to be split into reusable services. This improves modularity, simplifies maintenance, and enables independent deployment of business logic.

Environments

Supports separate Development, Testing, and Production environments. It helps validate changes before deployment while maintaining application stability.

Mobile

Generates mobile-ready applications automatically. Users can access Creator apps on Android and iOS without developing separate native applications.

5. EXPERIMENTAL RESULT & CONCLUSION

The Zoho Creator environment was successfully set up, and the Order Management Application was deployed. The form entry controls, data grids, and real-time dashboard widgets were systematically verified.

Conclusion: This experiment demonstrated that Zoho Creator abstracts complex database setup, backend scripting, and UI rendering into an intuitive visual platform. Through its integrated multi-tier architecture, developers can build, deploy, and maintain scalable cloud applications in a fraction of the time required by traditional software development approaches.
